

Figure 2b — Multi-model spatial comparison, Week-2 lead (init 2026-02-05, Week 2)
Valid 12-18 Feb 2026 · anomalies vs ERA5 climatology · India (IMD regions)

T2M anomalies use the ERA5 climatology as reference; ECMWF/NCEP T2M is a (mx2t6+mn2t6)/2 daily proxy, so their uniform cold offset is largely a model-climate/proxy bias — judge pattern skill by PCC, not mean bias.
