

Case study 1 — precipitation: init 2026-03-26, verified at week-6 lead (India only)

Week-6 mean anomaly (forecast days 36–42) — India land pixels only (value = All-India area mean)

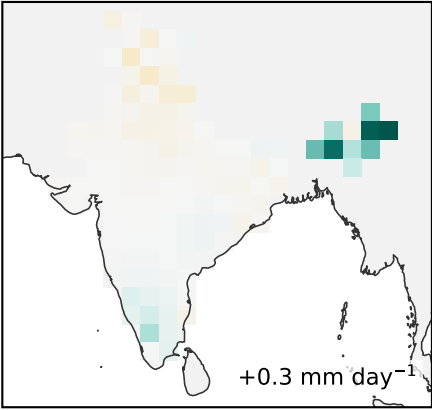

ERA5 (obs)

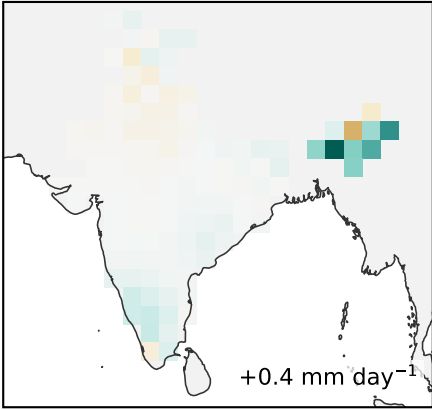

SPIRE

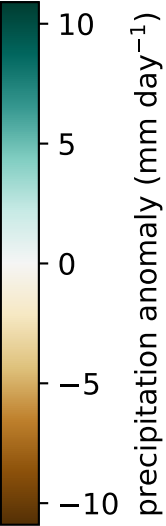

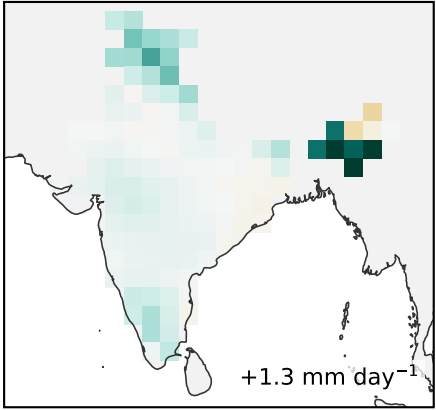

FuXi-S2S

ECMWF

NCEP

How to read:

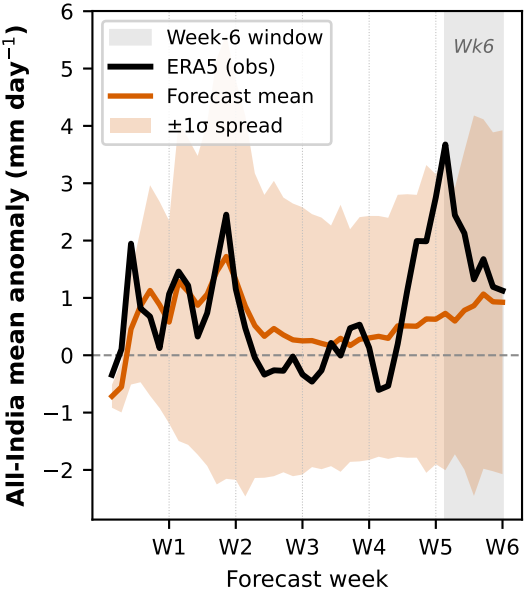

Black line = ERA5 observed
Colour line = Model forecast
Shaded band = $\pm 1\sigma$ ensemble
Grey area = Week-6 window
Dashed zero = climatology

Key Finding

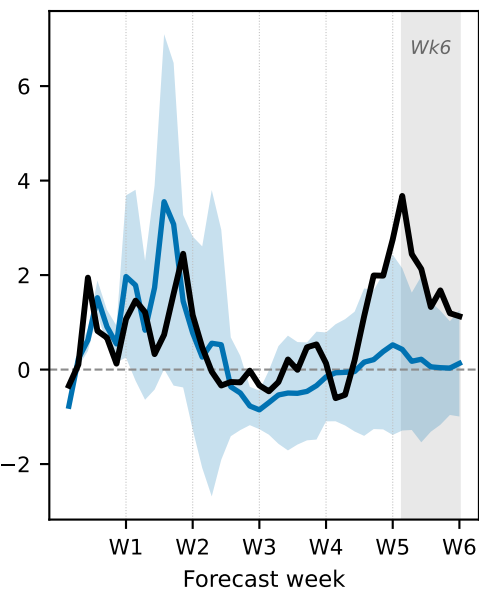

No model fully captures the observed +ve precip anomaly over NE India at week-6 lead.

SPIRE gets the sign correct but underestimates magnitude. FuXi-S2S and ECMWF show ~zero anomaly (skill lost beyond W4).
